FOCUS

SEA CAGE LIGHTING

**PLANET
LIGHTING**

Meet Uno

With Uno, three becomes one: your slimline and sea-ready all-in-one housing, controller and power supply. Each Uno is its own environmentally sealed and easily interchangeable unit and provides up to 600W in a package weighing only 5.2 kg.

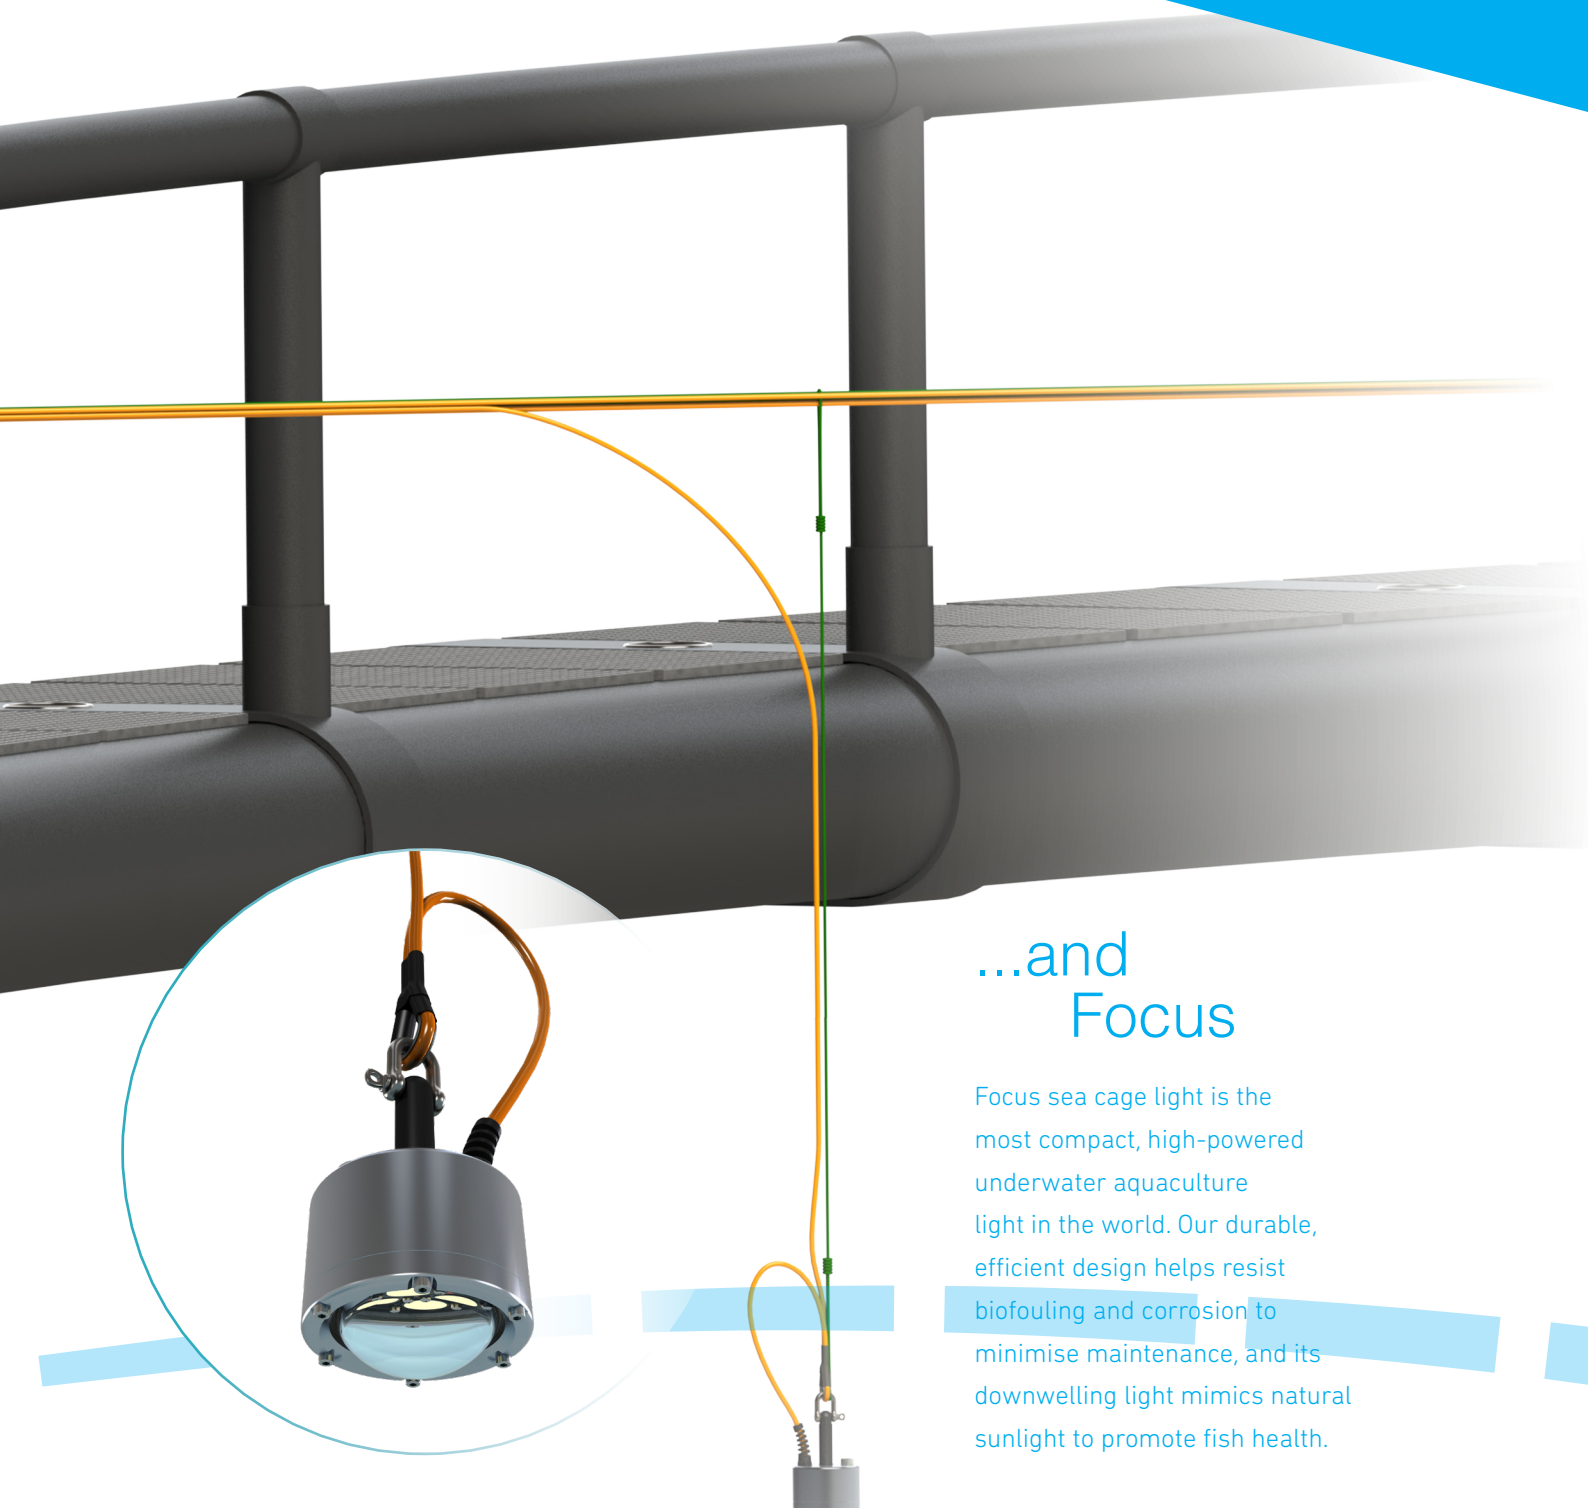

Uno Panel

Uno's toolless mounting counterpart, Uno Panel, allows easy, hassle-free operation and the ultimate in portability.

Clear the path and focus on what's important with the most compact and powerfully efficient sea cage lighting under the sun.

Delivering class-leading low operational costs and headache-free operation, Planet Lighting's Focus sea cage lighting technology represents the highest performance in the most compact and lightweight package available. Proven at sea since 2012, Focus is robust, easy to use and designed to significantly limit maintenance and downtime so you can focus on what's important.

...and Focus

Focus sea cage light is the most compact, high-powered underwater aquaculture light in the world. Our durable, efficient design helps resist biofouling and corrosion to minimise maintenance, and its downwelling light mimics natural sunlight to promote fish health.
